If the weighted average fuel price for the second and each succeeding year of this contract exceeds the product of that for the previous year and the current (most recent) CPI, the difference will be the Fuel Adjustment Factor. This Fuel Adjustment Factor multiplied by the total number of gallons purchased in the latest year will equal the additional compensation due the Contractor. If the weighted average fuel price for the most recent year does not exceed the product of that for the previous year and the most recent annual CPI, no adjustments will be made in compensation due the Contractor. All interpretations of the fuel cost adjustment calculation method shall be made by the City.
